3. SAFETY MESSAGE / EXPANDED SAFETY MESSAGE, SAFETY PLAN, SITE SAFETY PLAN:
Hazard Tree – Hazardous Trees

Multiple incidents of falling dangerous trees have been reported on the fire. The C2 and Poplar fuel types combined with the high indices, continuous burning days and high or shifting winds are resulting in common tree failure. Here are some examples of dangerous trees situations found on the fire:

Be diligent in using a heads-up approach at, all times. Use your training to identify and communicate known danger tree hazards and work accordingly.

- ✓ Spruce have shallow root systems where continuous burning can easily affect tree stability,
- ✓ Watch out for changing winds and areas of continuous burning,
- ✓ Re-assess work areas including travel corridors, heli pads, staging and pump sites.
- ✓ Look for alternative strategies to minimize exposure in spruce or high-risk situations, i.e. establishing No-Work-Zones, use of sprinklers or use of equipment.
- ✓ Use spotters
